Condition Assessment

for Compabloc

Quit guessing – get the facts instead

Our Condition Assessment service helps you understand the status of your Compabloc and secure uptime until the next shutdown. By providing interpretations and maintenance recommendation, we ensure your heat exchanger remains in good condition. Implementing these measures will prevent potential leaks and unit failures, reduce operating costs, and secure final product quality. This leads to increased equipment reliability and helps mitigate unsafe operations.

Our service helps you with:

- Ensuring safety and quality of the output
- Reducing downtime
- Lowering operation costs

How it works

Our experts evaluate the current condition of your Compabloc, through mechanical and visual inspections and other test methods. We follow a strict process to inspect the unit, performing specific tests to identify fouling, and gasket replacement to secure tight and perfect sealing of the unit. This service is carried out periodically at your site or in one of our service centres as part of your regular maintenance plan, helping you make the most of your planned shutdown period.

Upon completion, our team will deliver a comprehensive report encompassing all findings, interpretations, and maintenance recommendations to avoid future production loss.

Additionally, we keep records of all documents to maintain a complete history of interventions and assessments of your heat exchanger's condition, ensuring thorough follow-up.

How the service can be delivered

On site

Remotely

At service centres

On board

In dry dock

24/7/365 Service and Support

With service centres, field service engineers and spare parts distribution hubs around the world, the Alfa Laval Service network is always on the job for you.

When you contact our 24/7/365 Service and Support, our experts coordinate everything to quickly address your needs – either remotely via our digital tools or on site.
